Temperature Monitoring Checks

We conduct temperature checks to meet funder requirements and assure a safe, quality product.

Each route is required to have a temperature check at least once a month. Volunteers only need to record the current temperature. The temperature may not be exactly as indicated below. Our team will handle any temperature concerns.

- Hot food must be at 135°F or higher.
- Cold food must be at 41°F or lower.

How it works:

- Your last meal and route stop will be labeled "TRAY, TEST."
- Please record a temperature for each item that is specified.
- In the small pouch, remove the thermometer and insert the probe halfway through the food item.
- Let thermometer reading stabilize.
- Clean probe after each use.
- Put meal back in the meal bag and return to pick-up location.
- After taking the temperature, you do not need to do anything else. Our team will follow up accordingly.

If you have any questions, call our driver supervisors at 614-437-2891.
